The vegetation map derives from a program to map wildlife habitat statewide using landfall data and computerized GIS, and to Texas Tech's Geographic Information Systems Center. The map represents a generalized synthesis of currently existing vegetation patterns from previously produced larger scale maps. Delineations of vegetation are indicated in only those areas where the actual occurring vegetation exhibited adequate resolution for depiction.

This map is a reproduction of the earlier map compiled by Roy C. Frye, Kirby L. Brown, and Craig A. McElhannon, Texas Parks and Wildlife Department, 1984.
